

Vaanya Singh.

Computer science undergraduate at RVCE who designs and builds AI products end to end — from multi-agent backends, RAG pipelines and evaluation frameworks to the interfaces people actually use.

01 — EXPERIENCE

AI Intern, *Grid (Pragyaam Data Technologies)*

Jun 2026 - Present

Bengaluru

- Built an evaluation framework and evaluated a LangGraph AI agent system end to end in LangFuse: wrote test cases, defined custom metrics and iterated on agent reliability across scenarios.
- Authored backend configuration, metadata and parsing logic for a widget-builder agent, adding two new dashboard widget types.
- Built an SDV data simulator generating realistic synthetic datasets for testing and model evaluation; contributed model research and documentation to architecture decisions.

AI Intern, *SKF India*

Aug 2025 - Oct 2025

Bengaluru

- Designed and built a chatbot's backend logic and UI, contributing to system architecture and integration workflows on Azure.
- Annotated, classified and structured datasets for enterprise AI workflows across Snowflake and Databricks.

Junior Developer (Intern), *Avalanche Laboratory*

Jul 2025 - Sep 2025

Remote · Tallinn, Estonia

- Implemented iPad-first designs in React Native (Expo), optimising responsiveness across screen sizes.
- Ran end-to-end testing on Xcode Simulator and TestFlight, tracing and resolving issues before App Store launch.

02 — PROJECTS

Raseed — *multi-agent AI copilot for chartered accountants*

FastAPI · Next.js · Supabase/pgvector · GCP

- Engineered a FastAPI backend with 22 REST endpoints over a seven-table Supabase schema with row-level security, powering a five-agent orchestrated system.
- Designed custom intent routing and a document-grounded RAG pipeline (pgvector + text-embedding-004), plus a token-streaming chatbot.
- Solo-owned architecture through deployment on Cloud Run and Vercel, including a Next.js frontend with human-in-the-loop confirmation gates. Chose prompt-based LLM anomaly detection over IsolationForest to reason over transaction narratives, not static thresholds.

Go Girl Organisation *website*

React · Figma · Razorpay · Netlify

- Designed the UI/UX in Figma and built the React frontend with Razorpay donations. Rebranded the guidelines and revamped the site, contributing to \$10,000 in CSR funding via SEO & AEO. Restructured navigation and sign-up flows, lifting completion by 40%.

GenBash — *natural-language Linux command generator*

Python · Groq · Llama 3.1

- Built a Python CLI translating plain English into Linux commands via a Groq API layer, cutting response latency by 30%+. Open-sourced with CI/CD and docs, attracting 5+ external contributors.

Bengaluru, India

EDUCATION

BE, Computer Science & Engineering

RV College of Engineering, Bengaluru

Expected 2027 · CGPA 7.72

COURSEWORK

DSA, Operating Systems, Computer Networks, DBMS, Deep Learning, NLP, AI & ML, Theory of Computation, Data Science for Engineers, Linear Algebra, Probability & Statistics, Design Thinking, Web Frameworks, Digital Logic Design, Financial Management.

SKILLS

AI/ML & data: LangChain, LangGraph, LangFuse, Gemini, RAG/pgvector, scikit-learn, Azure ML, Google Cloud.

Backend & frontend: FastAPI, Next.js, React, React Native, Supabase/PostgreSQL, REST API design.

Design: Figma, UI/UX, design thinking, rebranding, interactive prototypes.

Languages: Python, Java, C++, C, SQL, R, JavaScript, HTML, CSS.

Core CS: DSA, OS, networks, DBMS, system design, OOP.

Tools: Git/GitHub, CI/CD (Netlify, Cloud Run, Vercel), Xcode, TestFlight, Snowflake, Databricks.

LEADERSHIP & COMMUNITY

- Community & Design Lead, Go Girl Organisation** — scaled 4 nationwide coding programmes reaching 100+ underprivileged girls; led a campaign raising \$15,000.
- Core Team, Design & Content Lead, Google Developer Group RVCE.**
- Senior Associate, E-Cell Design & Tech** — built the E-Cell website.
